

Our vision statement

: Project goals

Our project starts with a problem we all encounter too often. Imagine, you are in a big shopping center. You enter a bunch of stores but you can't find anything that you like, that sounds familiar right?. There is a saying by Miuccia Prada "What you wear is how you present yourself to the world, especially today, when human contact is so quick.

Fashion is instant language.", and we all think that it is true. Therefore we came up with the idea to create a platform in which people can share their own designs and order items that suit their own beliefs and personality.

In particular, we want to create a simple but powerful app, in order to allow the customers to find or upload their own designs, and to purchase the clothes that they most connect to. In addition we want to create a ML module that can learn your preference, and suggest more clothes that you may like.

what is included in the project and exclude from the project?

Our main target is to enable and simplify users way to achieve desirable clothes, together with the ability to share designs with each other.

Our project will include Possibility to design clothes, share them with other users and purchase them. We will also suggest some AI algorithm that can offer a suit cloth to your own fit.

we will not include in the project our own design (only customer's design), there will be no commercials and the project will not support ios operating system.

There are many features and requirements in our project, some of them are essential and some of them are desirable:

Essential in our project is the ability to design clothes, a big and accessible database, payment system, and to supply the order to the customer.

Desirable - sharing information with other customers, AI algorithm which can offer a personalized design based on personal style.

:Major milestones and deliverables

1. Creating an interface and login menu - 15.01.23
2. Creating a window of users' designs and the ability to share their designs with others- 30.02.23
3. Saving design, orders and users metadata in the DataBase. - 30.03.23
4. Payment and order system in our application to order the design clothes and linking between customers and suppliers in our application or rather making our own manufacture and order center.- 30.04.23
5. AI suggestions for your next shopping in the application- 30.05.23

For customers who want to take a part in their clothes designing process. “myDesign” app is a clothes designing platform that allows anyone to design their own clothes.

Unlike the traditional clothes industry where foreign designers decide about the fashion issues and hold all the design decisions of the companies design. Our product allows users to decide on their own design in a way that they desire.
